Hard Water

Warning Signs in Every Room

KITCHEN

- Recurring film after cleaning—common on glassware and fixtures
- Mineral buildup from heated water—often appears in kettles and coffee makers

BATHROOM

- Recurring residue on wet surfaces—common on glass, tile and fixtures
- Weaker or uneven shower spray—often caused by deposits in showerhead openings

LAUNDRY ROOM

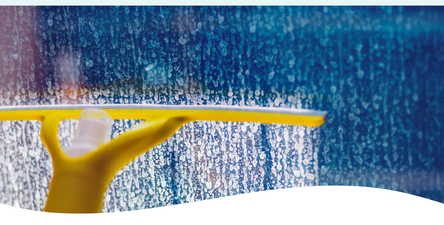

- Reduced detergent performance—more product may be needed for the same result
- Persistent fabric stiffness—can continue across repeated wash cycles

UTILITY & PLUMBING AREAS

- Buildup around valves and fittings—can signal ongoing mineral accumulation
- Gradual loss of water flow—can occur as deposits build inside plumbing

A Stronger Hard-Water Clue: The Pattern

Hard water is more likely when similar mineral, cleaning and flow issues recur throughout the home.

Choose the Right Hard Water Treatment

WATER SOFTENERS
reduce hardness minerals through ion exchange.

WATER CONDITIONERS
alter how hardness minerals behave in the water.

SCALE-CONTROL SYSTEMS
help limit scale formation on plumbing, fixtures and equipment.

BEST PRACTICE

Base treatment selection on verified water hardness, household demand and the specific areas affected by scale.
